

At Cheyne Eye Center, we are passionate about your eye health. With this in mind, we will require Optos digital retinal imaging on ALL of our routine comprehensive eye health exams. This extraordinary technology allows us to ensure that you are receiving the most thorough eye health exam possible. This imaging also helps us ensure that you do not have vision threatening or sometimes life-threatening conditions associated with your eyes. With Optos retinal imaging, we have the ability to store images and refer back to them from year to year. This allows us to spot subtle changes even earlier than before. Optos also allows us to perform MOST eye exams without dilation.

Even though this technology is incredibly important and often reveals early eye disease long before the patient experiences symptoms, it is usually **NOT** covered by Vision Benefits and Medical Plans.

If we are unable to submit the Optos to your plan, the result will be your normal exam copay plus \$35 for the Optos images.

Additionally, we would like to let our patients know that we have competitive pricing. **We have complete pairs of glasses starting at \$99.** Visit with our expert Opticians to find out more.

Thank you for being our patient.

Sincerely,

Chris Cheyne, OD
